

MOHIT SAJWAN

Senior Backend Engineer | Java | Spring Boot | Microservices | AWS

Email: mohitsajwan0@gmail.com | Phone: +91-9690420089 | LinkedIn: linkedin.com/in/mohit-sajwan-84767a15a | GitHub: github.com/sajwanmohit | Portfolio: sad-davinci-983f7b.netlify.app

PROFESSIONAL SUMMARY

Backend-focused engineer with 5+ years of experience building scalable banking and financial platforms using Java, Spring Boot, microservices architecture, and AWS. Experienced in designing REST APIs, distributed services, and secure integrations for global banking clients including Westpac and Financial Conduct Authority (UK). Strong background in system design, cloud deployments, CI/CD pipelines, and modernizing legacy banking systems into high-availability microservice platforms.

KEY ACHIEVEMENTS

- Modernized legacy core banking modules by migrating RPG components to Spring Boot microservices architecture.
- Designed and delivered multiple REST APIs powering banking workflows including cheque management and customer services.
- Built consent management APIs enabling secure data sharing between banks and third-party vendors.
- Implemented backend workflows for debit/credit card reissue platform used in digital banking channels.
- Developed serverless applications using AWS Lambda and API Gateway supporting scalable backend processing.

TECHNICAL SKILLS

- Languages: Java (8+), JavaScript, TypeScript
- Backend: Spring Boot, REST API Development, Microservices Architecture, Node.js
- Frontend: Angular, React, HTML, CSS
- Architecture: Distributed Systems, Scalable Backend Services, API Design
- Cloud & DevOps: AWS (Lambda, API Gateway, EC2, S3, DynamoDB), Docker, Jenkins, CI/CD Pipelines
- Databases: PostgreSQL, MongoDB, SQL
- Testing & Tools: JUnit, Mockito, Git, Postman, Jira, Kibana, Elasticsearch

PROFESSIONAL EXPERIENCE

Fiserv / Signature International – Full Stack Developer (Jul 2023–Present)

Migrating legacy banking systems from RPG to Spring Boot microservices with Angular frontend. Built secure REST APIs for cheque management, account workflows, and banking product integrations. Developed cheque stop/hold payment features preventing unauthorized transactions and implemented cheque book ordering workflows for branch pickup or home delivery. Working on backend integrations for Agent API use cases supporting internal automation and service orchestration.

Fiserv – Backend Developer (Client: Westpac Australia) – ConnectID (Mar 2022–Jul 2023)

Developed consent management platform enabling secure customer data sharing between banking systems and third-party vendors. Implemented Spring Boot REST APIs managing consent lifecycle and secure data exchange with strong validation and authorization controls.

Fiserv – Full Stack Developer (Client: Westpac Australia) – Card Reissue Platform (Mar 2021–Feb 2022)

Developed backend services enabling customers to request replacement debit and credit cards. Built Spring Boot microservices managing card issuance workflows and transaction validation. Implemented UI components using React and developed automated testing using JUnit and Mockito.

Cognizant Technology Solutions – Full Stack Developer (Client: Financial Conduct Authority UK) (Jul 2020–Mar 2021)

Built cloud applications using Spring Boot, Angular, and AWS serverless architecture. Implemented scalable backend services using Lambda and API Gateway and optimized search features for regulatory platforms.

EDUCATION & CERTIFICATION

B.Tech – Computer Science Engineering, DIT University (2020) | AWS Certified Cloud Practitioner (2023–2026)
